SCORE: 27/28 = 96.4% Grade: A

SECTION BREAKDOWN

| Section                               | Score | Percentage | Status |
|---------------------------------------|-------|------------|--------|
| Introduction to Unsupervised Learning | 5/5   | 100.0%     | PASS   |
| K-Means Algorithm Fundamentals        | 3/3   | 100.0%     | PASS   |
| Distance Metrics in Clustering        | 3/3   | 100.0%     | PASS   |
| K-Means Implementation Steps          | 4/4   | 100.0%     | PASS   |
| The Elbow Method                      | 3/3   | 100.0%     | PASS   |
| Data Preprocessing for K-Means        | 4/4   | 100.0%     | PASS   |
| K-Means Limitations and Challenges    | 2/2   | 100.0%     | PASS   |
| Real-World Applications of K-Means    | 3/4   | 75.0%      | PASS   |

QUESTIONS TO REVIEW

Q28: A company applies K-Means to their customer data with K=5 and gets poo...

Feature scaling is one of the most common and impactful preprocessing steps for K-Means. If features have different scales, the results can be heavily biased. Checking scaling should be the first troubleshooting step before trying different K values or changing algorithms.
