

STUDENT INFORMATION

Name: Seroney Winnie Jepchumba
Registration No: C026-01-0797/2024
Submitted: 2026-07-24 09:13:40

SCORE: 26/28 = 92.9% Grade: A

SECTION BREAKDOWN

Section	Score	Percentage	Status
Introduction to Unsupervised Learning	5/5	100.0%	PASS
K-Means Algorithm Fundamentals	3/3	100.0%	PASS
Distance Metrics in Clustering	3/3	100.0%	PASS
K-Means Implementation Steps	2/4	50.0%	OK
The Elbow Method	3/3	100.0%	PASS
Data Preprocessing for K-Means	4/4	100.0%	PASS
K-Means Limitations and Challenges	2/2	100.0%	PASS
Real-World Applications of K-Means	4/4	100.0%	PASS

QUESTIONS TO REVIEW

Q13: During the update step of K-Means, how is a centroid's new position ca...

The new centroid position is calculated as the mean (average) of all data points currently assigned to that cluster. This minimizes the within-cluster sum of squares. Options A, C, and D are not how the standard K-Means update step works.

Q15: What is the purpose of the max_iters parameter in K-Means?...

The max_iters parameter sets an upper limit on the number of iterations the algorithm will perform. This prevents infinite loops when the algorithm does not converge, ensuring it always finishes within a reasonable time.
